Wildlife Habitat Yard

All wildlife has basic requirements for their survival. These requirements must be met in your yard for wildlife to survive there and flourish. If you can check off the minimum number in each category your yard has what it takes to encourage a healthy and diverse wildlife population.

Food: Plants are the best food source for wildlife. Feeders can be used as a supplemental source of food, especially during the winter. What natural food sources or feeders does your yard have? (Minimum requirement checked off is three.)

Plants Foods: ___ Seeds ___ Fruits ___ Foliage ___ Nuts ___ Nectar ___ Pollen
 ___ Berries ___ Sap ___ Flowers

Feeder Types: ___ Tube ___ Suet ___ Platform ___ Squirrel ___ Butterfly ___ Hummingbird

Water: Wildlife needs a clean source for drinking and bathing. How does your yard provide water for wildlife? (Minimum requirement: 1)

___ Birdbath ___ Lakefront ___ Stream ___ Water Garden / Pond

Cover: Wildlife needs places to find shelter from the weather and from predators. They also need shelter in which to raise their young. How do you provide cover for wildlife in your yard? (Minimum requirement: 2)

___ Brush Pile ___ Vines ___ Rock Pile ___ Log Pile
___ Meadow Prairie ___ Evergreen Trees ___ Nestling Platforms ___ Dense Shrubs/Thicket
___ Dead Trees/Snags ___ Deciduous Shrubs ___ Host Plants ___ Water Garden/Pond
___ Bat Houses ___ Bird Houses
